

SIA VIC TEC has launched a research project entitled "**Development of integrated control and communication systems for autonomous marine platforms with increased safety and adaptability**"

(No. DI-13), which aims to develop a unified, modular and secure control interface for the control of various types of robotic systems. The solution is intended as a cross-platform control environment that is applicable to both civil and defense needs.

The research project is being implemented under the Recovery Fund's Operational Program "Latvia's Recovery and Resilience Mechanism Plan 2.2. Reform and Investment Direction "Support for the introduction of new products and services in business" within the framework of the SIA "VMKC" project "Support for the introduction of new products and services in business", CFLA contract No. **2.2.1.3.i.0/1/24/A/CFLA/004**.

Research project duration: **07/2025-03/2027**.

Total cost of the research project EUR 588,340.00, including EUR 430,024.00 financing from the European Union Recovery Fund.
